

UNC
LINEBERGER COMPREHENSIVE
CANCER CENTER
N.C. CANCER HOSPITAL

CLINICAL/ TRANSLATIONAL RESEARCH AWARDS

Grant funds are available for the development of clinical and translational cancer research projects.

Clinical and translational cancer research projects include studies using human subjects or human materials (blood, tissue, x-rays, etc) with ***direct application*** to cancer diagnosis, treatment, or survivorship (including quality of life issues). Projects that feature collaborations between basic scientists and clinical researchers or that clearly demonstrate basic and clinical expertise are especially encouraged.

UNC Chapel Hill faculty, fellows, and postdoctoral trainees are eligible to apply. Applicants who are not Cancer Center members must have a member sponsor their application. Postdoctoral trainees must have a faculty mentor who is a Cancer Center member.

The Center anticipates making several awards of up to \$50,000 each. Funding for these awards is made possible by support from private donors, including the Carolina Capstone Challenge, the National Cancer Institute, and other grant funding.

Deadline for applications is *February 17, 2009.*

Applications forms and guidelines are available on the Cancer Center's website: <http://cancer.med.unc.edu/research/awards/>
