N.C. CANCER HOSPITAL

POPULATION SCIENCES RESEARCH AWARDS

Grant funds are available for the development of research projects in population sciences, specifically cancer prevention and control and cancer epidemiology.

Cancer prevention and control projects include studies on the prevention and early detection of cancer, as well as cancer survivorship, behavioral and social sciences research, dissemination, and health services/outcomes research. Cancer epidemiology research projects include but are not limited to studies on etiology and cancer risk. Other fields may also be relevant and interdisciplinary projects are especially encouraged.

UNC Chapel Hill faculty, fellows, and postdoctoral trainees are eligible. Applicants who are not Cancer Center members must have a member sponsor their application. Postdoctoral trainees must have a mentor who is a Center member.

The Center anticipates making several one-year awards of up to \$50,000 each. Funding for these awards is made possible by support from private donors, including the Carolina Capstone Challenge, the National Cancer Institute, and other grant funding.

Deadline for applications is *February 17, 2009.*

Applications forms and guidelines are available on the Cancer Center's website: <http://cancer.med.unc.edu/research/awards/>
